ELIMINATION OF COMMODITY DETAIL ON IMPORTS VALUED FROM \$50 TO \$99

In April, 1962, it became necessary to increase the speed at which statistical clerks could process the customs entries and invoices from which import statistics are derived. Studies made in 1957 and 1958 indicated that some 20% of the statistical components which required separate coding and tabulation involved values of between \$50 and \$99, and that these accounted in total for only about 1% of the value of imports. It was therefore decided to suspend the coding by commodity of values in this range; they are still included in country totals and grand totals, but this requires less than half the work formerly necessary to process these components.

Although components valued between \$50 and \$99 account for only about 1% of the total value of Canadian imports, their importance is much greater in the case of particular commodities. It is estimated that of the 2,246 classes included in groups 1 to 9 of the commodity classification, there are at least 157 commodity classes with annual imports of \$100,000 or more to which components valued between \$50 and \$99 contributed at least 5% of total value, and to 34 of these classes components in this range contributed at least 10% of class totals (see Tables 2 and 3 of this insert). A considerable number of commodity classes with annual totals of less than \$100,000 also obtained a significant proportion of their value from components valued between \$50 and \$99; in general small value shipments tend to be more important in small classes than in large classes.

Effective with statistics for April, 1962, all imports cleared through Customs on entries whose total value is less than \$100.00 are included in class 9275, rather than being classified by commodity. In addition, whenever a single customs entry covers a number of different commodities, those components individually valued at less than \$100.00 are also included in class 9275 unless one of two conditions is met:

- (1) Two or more minor components of a single entry belong in the same sub-group of the classification and together total \$100.00 or more; in this case the total of the minor components is included in the n.o.p. class of the sub-group. This rule was intended to minimize the damage to sub-group totals for such imports as fresh fruits, fresh vegetables, florist and nursery stock, clothing, etc.
- (2) The minor components of a single entry amount in total to less than 10% of the value of the largest component; in this case they are included with the largest component. This rule was intended to simplify the coding of such imports as machines imported with spare parts or ancillary materials, etc.

Statistics for April, 1962, and preliminary data for May and June, indicate that class 9275 included about 1.5% of total imports in these months, whereas in the absence of the two abovementioned qualifications to the \$100.00 rule this class could have been expected to include almost 2% of the total. Components valued at less than \$50.00 (the former content of class 9275) have normally accounted for almost 1% of imports in recent years.

Effective with statistics for July, 1962, the qualifications to the \$100.00 rule were altered in an attempt to restore to the proper commodity class, rather than merely to the proper sub-group, most of the minor components of customs entries which cover a number of different commodities. From July, all components valued at \$50.00 or more on entries with a total value of \$100.00 or more will be coded by class. It is not yet possible to assess the effects of this change. No further steps towards restoring the former \$50.00 coding limit are likely to be possible in the near future.

One additional change made effective with statistics for April, 1962, is in the treatment of packing material. Whenever import packing was separately valued on customs entries it was formerly included in class 9030. Such packing is now treated as part of the value of the goods contained in it, unless the packing is re-usable. This change was introduced earlier in export statistics, and has been found to facilitate the processing of customs entries. It will reduce the total value of class 9030 to less than one-third its former level, but is expected to have little effect on totals for any other individual class.

(ii)

The following tables summarize the results of analyses of import components valued between \$50 and \$99 for the months of May 1957, August 1957, November 1957, February 1958, November 1961, and March 1962, supplemented by a few additional observations for various months of 1961 and 1962 in the case of commodity classes established since 1958.

Table 1 shows the value of \$50-\$99 components by main groups and in total for each of the months studied, and the proportion that these contributed to published totals for the main groups and for total imports. On the average, slightly more than half the indicated proportions will be transferred from groups 1-8 to group 9 in statistics for April, 1962, and subsequent months.

Table 2 shows the number of classes with annual totals of \$100,000 or more in any of the years 1959, 1960 or 1961 (plus a few new classes established in January, 1962) to which components valued from \$50-\$99 contributed 5% or more of the total value of the class in the months studied. There may be a few additional classes established since February, 1958, in which the importance of \$50-\$99 components is 5% or more; it has not yet been possible to check these classes as thoroughly as may be desirable.

Table 3 lists individually the classes summarized in Table 2, and shows for each the weighted average importance of \$50-\$99 components indicated by available studies, together with the range of variation and qualifying notes. Except for such n.o.p. classes as 20, 128, 1720, 1836, etc., these classes will probably be understated in statistics for April, May and June, 1962, by about the proportion shown; the n.o.p. classes will probably be overstated as a result of the rules set forth in paragraph 3 above. From July, 1962, the margins by which most individual classes are understated should be somewhat reduced, but both specific and n.o.p. classes will be similarly affected.

Table 1. VALUE OF \$50-\$99 COMPONENTS, BY MAIN GROUPS, AND PROPORTION CONTRIBUTED TO GROUP TOTALS AND TOTAL IMPORTS

NOTE: Values in this table are totals of the \$50-\$99 components in each main group and in the nine main groups taken together. Percentages show the proportions of each main group and of the nine main groups taken together which were derived from \$50-\$99 components.

Main Group	Unit	May '57	Aug. '57	Nov. '57	Feb. '58	Nov. '61	Mar. '62	Average

123	11	4	46	a	1713	5	3	8	
124	11	8	25	a	1720	6	6	9	

a - Components valued from \$50-\$99 usually form a smaller proportion of total imports in months when total imports are large.

b - Class established January, 1961; three observations for months of November 1961, January 1962 and March 1962.

c - No imports in August, 1957; five observations only.

d - Importance of \$50-\$99 components varies irregularly.

Animals and animal products (except chemicals and fibres)	2001 to 2347
Fibres, textiles and textile products	3001 to 3999
Wood, wood products and paper	4002 to 4311
Iron and its products	5001 to 5894
Non-ferrous metals and their products	6001 to 6599
Non-metallic minerals and their products (except chemicals)	7001 to 7315
Chemicals and allied products	8001 to 8989
Miscellaneous commodities	9000 to 9275
Special transactions — Non-trade	9905 to 9992

VALUE, PRICE AND VOLUME INDEXES at end of report.

EXPLANATORY NOTES

1. **Source of Data.** Statistics of imports are based upon the declarations of importers (import entries) as subsequently checked by customs officials.
2. **Valuation.** The value of goods imported is usually the value as determined for customs duty purposes. In most cases this corresponds to the value shown on the invoice accompanying the goods, converted to Canadian dollars at authorized exchange rates (usually the commercial rate prevailing at the date on which the goods were actually dispatched to Canada), and excluding such charges as freight, insurance, handling and taxes. In effect, therefore, import values are taken f.o.b. point of shipment in the country of export.

Effective with statistics for January, 1959, the statistical value of imports on which dumping duty has been collected is considered to be the value of the goods as declared by the importer (i.e. the value for duty less the amount of dumping duty). This change in procedure is to conform with the principle that trade statistics should show, whenever possible, the actual amount paid for imports. Previously the statistical value of such imports was considered to be the value for duty.

3. **Units of Quantity.** Weight, where shown, is the net weight of the goods, excluding the weight of such packing as is required for shipment, except in certain special cases otherwise defined in the Customs Tariff. The expression "ton" means 2,000 pounds, and "cwt." 100 pounds, avoirdupois. Where other units of quantity are used, Imperial standards apply.

In this report are statistical classes such as "lawn mowers, power, and parts" which show a quantity in "number" and a value. In these classes the "number" refers only to the number of substantially complete units imported, while the value includes also the value of any parts of the commodity imported. For such classes the average value per unit cannot be ascertained.

4. **Coverage.** Statistics of imports include substantially all goods which enter Canada and are cleared by customs officials for domestic sale or use. The series therefore includes goods which are cleared by customs immediately on entry into the country, and goods cleared out of customs warehouses; but excludes goods placed in customs warehouses on entering the country. The technical phrase "Imports entered for consumption" which is sometimes used to describe Canadian import statistics does not imply that all imports will actually be consumed in Canada, but only that they are free to be so consumed without further customs formalities.
5. **Exclusions.** Import statistics exclude gold, but include gold products where the value of the gold content is less than 80% of the value of the commodity. A small amount of gold scrap in the form of jewellers' sweepings is also included. Other important exclusions are goods for the use of United States forces stationed at treaty bases in Canada, ships of British construction and registry imported for use in Canada, ships purchased for use in foreign trade, bunker supplies and ships' stores purchased by Canadian vessels abroad, temporary imports for exhibition or competition, Canadian-owned military equipment returned to Canada, and, from January 1, 1960, goods imported for foreign armed forces or diplomats stationed in Canada, settlers' effects, private donations and gifts, and tourist purchases exempt from duty (see blue pages of the January, 1960, issue of this report).

6. **Countries Credited.** Imports are usually credited to the country from which the goods were consigned to Canada. The country of consignment is the country from which goods have come to Canada without interruption of transit except in the course of transfer from one means of conveyance to another.

An exception to this rule is made in the case of imports of goods originating in Central or South America (including the Antilles and Bermuda) which are consigned to Canada from the United States. These imports are credited to the country in which the goods originated.

7. **Time Periods.** Import statistics for any month include all goods declared on import entries received at the Bureau of Statistics during the calendar month in question.
8. **Abbreviations.** Many descriptions of countries and commodities used in this report are abbreviated or incomplete because of mechanical limitations. A key to abbreviations of countries appears in this report, and full descriptions of all commodities appear in Volume III of the annual report "Trade of Canada". The letters "N.O.P." mean "not otherwise provided for", "N.E.S.", "not elsewhere specified".

9. **Revisions.** All statistics in this report are subject to revision. Revisions to previous reports are published on the coloured pages at the beginning of each monthly report.

KEY TO ABBREVIATIONS OF COUNTRIES

Note: The classification of Countries with a statement of the territorial limits used for statistical purposes will be found in the blue pages of the January, 1960 report. There are additional amendments of coverage in the January, 1961 and the January, 1962 reports.

Value, Price and Volume Indexes of Imports

The following table gives index numbers of the declared (statistical) value of imports by months, and of the unit value (price) and volume of these imports. The value index expresses the value of imports in a given month as a percentage of the monthly average in the base year. The price index is of the fixed-weight aggregative (Laspeyres) type, and combines unit values calculated from the monthly import statistics with specified wholesale or other price quotations. These latter quotations are used where inadequate quantity reporting or insufficiently homogeneous items in the trade statistics prevent the obtaining of sufficiently representative unit value series. The volume index is derived by dividing the value index by the corresponding price index, and is, therefore, of the currently-weighted (Paasche) type.

In computing the price index certain adjustments were made to the regular grouping of commodities used in the trade statistics, and all three indexes are presented on the basis of these adjusted groups. The chief adjustments are as follows: the two groups "agricultural and vegetable products" and "animals and animal products" have been combined into one group now titled "agricultural and animal products"; the sub-group "rubber and its products" (1678-1732) and the item "advertising matter" (4291) have been transferred to the "miscellaneous products" group; three "ships" items (9155-57) have been transferred to the "iron and steel and their products" group; and a few other adjustments designed to improve group classification by component material have been made. Beginning with statistics for January 1960, the trade totals used for the purpose of all three indexes are also adjusted for "Special Transactions - Non-Trade" as described in the blue pages of the January 1960 issue of this report. It should be noted that the item "arms, etc., British or N.A.T.O. countries" (9196) was already being deducted for index purposes from the "miscellaneous products" group and from the grand total prior to January 1960.

These indexes are currently computed from the original data for months, quarters and calendar years. Approximate indexes for other periods may be obtained by averaging the monthly values. Although such indexes will be less accurate than would result from a separate computation based on the original data, the margin of error is insufficient to necessitate a lengthy separate computation.

A complete record of these series by months for the post-war period is published in issues of Volume I of the annual report "Trade of Canada". Some additional commodity information appears in issues of the "Review of Foreign Trade". Details of the computation of the price indexes are given in DBS Reference Paper, No. 8, 1950, titled "Export and Import Price Indexes by Months, July 1945 - June 1950 (1948 = 100)".

TABLE OF CONTENTS

	Page
EXPLANATORY NOTES	2
KEY TO ABBREVIATIONS OF COUNTRIES	3
SUMMARY TABLES:	
Table 1. Imports by Countries	4
Table 2. Imports by Main Groups	7
DETAILED TABLE:	
Table 3. Imports by Commodities and Countries	8
	Class
Agricultural and vegetable products (except chemicals, fibres and wood):	
A — Mainly food	1 to 390
B — Other than food	1500 to 1846
Animals and animal products (except chemicals and fibres)	2001 to 2347
Fibres, textiles and textile products	3001 to 3999
Wood, wood products and paper	4002 to 4311
Iron and its products	5001 to 5894
Non-ferrous metals and their products	6001 to 6599
Non-metallic minerals and their products (except chemicals)	7001 to 7315
Chemicals and allied products	8001 to 8989
Miscellaneous commodities	9000 to 9275
Special transactions — Non-trade	9905 to 9992

VALUE, PRICE AND VOLUME INDEXES at end of report.

EXPLANATORY NOTES

1. **Source of Data.** Statistics of imports are based upon the declarations of importers (import entries) as subsequently checked by customs officials.
2. **Valuation.** The value of goods imported is usually the value as determined for customs duty purposes. In most cases this corresponds to the value shown on the invoice accompanying the goods, converted to Canadian dollars at authorized exchange rates (usually the commercial rate prevailing at the date on which the goods were actually dispatched to Canada), and excluding such charges as freight, insurance, handling and taxes. In effect, therefore, import values are taken f.o.b. point of shipment in the country of export.

Effective with statistics for January, 1959, the statistical value of imports on which dumping duty has been collected is considered to be the value of the goods as declared by the importer (i.e. the value for duty less the amount of dumping duty). This change in procedure is to conform with the principle that trade statistics should show, whenever possible, the actual amount paid for imports. Previously the statistical value of such imports was considered to be the value for duty.

3. **Units of Quantity.** Weight, where shown, is the net weight of the goods, excluding the weight of such packing as is required for shipment, except in certain special cases otherwise defined in the Customs Tariff. The expression "ton" means 2,000 pounds, and "cwt." 100 pounds, avoirdupois. Where other units of quantity are used, Imperial standards apply.

In this report are statistical classes such as "lawn mowers, power, and parts" which show a quantity in "number" and a value. In these classes the "number" refers only to the number of substantially complete units imported, while the value includes also the value of any parts of the commodity imported. For such classes the average value per unit cannot be ascertained.

4. **Coverage.** Statistics of imports include substantially all goods which enter Canada and are cleared by customs officials for domestic sale or use. The series therefore includes goods which are cleared by customs immediately on entry into the country, and goods cleared out of customs warehouses; but excludes goods placed in customs warehouses on entering the country. The technical phrase "Imports entered for consumption" which is sometimes used to describe Canadian import statistics does not imply that all imports will actually be consumed in Canada, but only that they are free to be so consumed without further customs formalities.
5. **Exclusions.** Import statistics exclude gold, but include gold products where the value of the gold content is less than 80% of the value of the commodity. A small amount of gold scrap in the form of jewellers' sweepings is also included. Other important exclusions are goods for the use of United States forces stationed at treaty bases in Canada, ships of British construction and registry imported for use in Canada, ships purchased for use in foreign trade, bunker supplies and ships' stores purchased by Canadian vessels abroad, temporary imports for exhibition or competition, Canadian-owned military equipment returned to Canada, and, from January 1, 1960, goods imported for foreign armed forces or diplomats stationed in Canada, settlers' effects, private donations and gifts, and tourist purchases exempt from duty (see blue pages of the January, 1960, issue of this report).
6. **Countries Credited.** Imports are usually credited to the country from which the goods were consigned to Canada. The country of consignment is the country from which goods have come to Canada without interruption of transit except in the course of transfer from one means of conveyance to another.

An exception to this rule is made in the case of imports of goods originating in Central or South America (including the Antilles and Bermuda) which are consigned to Canada from the United States. These imports are credited to the country in which the goods originated.
7. **Time Periods.** Import statistics for any month include all goods declared on import entries received at the Bureau of Statistics during the calendar month in question.
8. **Abbreviations.** Many descriptions of countries and commodities used in this report are abbreviated or incomplete because of mechanical limitations. A key to abbreviations of countries appears in this report, and full descriptions of all commodities appear in Volume III of the annual report "Trade of Canada". The letters "N.O.P." mean "not otherwise provided for", "N.E.S.", "not elsewhere specified".
9. **Revisions.** All statistics in this report are subject to revision. Revisions to previous reports are published on the coloured pages at the beginning of each monthly report.

KEY TO ABBREVIATIONS OF COUNTRIES

Note: The classification of Countries with a statement of the territorial limits used for statistical purposes will be found in the blue pages of the January, 1960 report. There are additional amendments of coverage in the January, 1961 and the January, 1962 reports.

Value, Price and Volume Indexes of Imports

The following table gives index numbers of the declared (statistical) value of imports by months, and of the unit value (price) and volume of these imports. The value index expresses the value of imports in a given month as a percentage of the monthly average in the base year. The price index is of the fixed-weight aggregative (Laspeyres) type, and combines unit values calculated from the monthly import statistics with specified wholesale or other price quotations. These latter quotations are used where inadequate quantity reporting or insufficiently homogeneous items in the trade statistics prevent the obtaining of sufficiently representative unit value series. The volume index is derived by dividing the value index by the corresponding price index, and is, therefore, of the currently-weighted (Paasche) type.

In computing the price index certain adjustments were made to the regular grouping of commodities used in the trade statistics, and all three indexes are presented on the basis of these adjusted groups. The chief adjustments are as follows: the two groups "agricultural and vegetable products" and "animals and animal products" have been combined into one group now titled "agricultural and animal products"; the sub-group "rubber and its products" (1678-1732) and the item "advertising matter" (4291) have been transferred to the "miscellaneous products" group; three "ships" items (9155-57) have been transferred to the "iron and steel and their products" group; and a few other adjustments designed to improve group classification by component material have been made. Beginning with statistics for January 1960, the trade totals used for the purpose of all three indexes are also adjusted for "Special Transactions - Non-Trade" as described in the blue pages of the January 1960 issue of this report. It should be noted that the item "arms, etc., British or N.A.T.O. countries" (9196) was already being deducted for index purposes from the "miscellaneous products" group and from the grand total prior to January 1960.

These indexes are currently computed from the original data for months, quarters and calendar years. Approximate indexes for other periods may be obtained by averaging the monthly values. Although such indexes will be less accurate than would result from a separate computation based on the original data, the margin of error is insufficient to necessitate a lengthy separate computation.

A complete record of these series by months for the post-war period is published in issues of Volume I of the annual report "Trade of Canada". Some additional commodity information appears in issues of the "Review of Foreign Trade". Details of the computation of the price indexes are given in DBS Reference Paper, No. 8, 1950, titled "Export and Import Price Indexes by Months, July 1945 - June 1950 (1948 = 100)".

DETAILED TABLE:	
Table 3. Imports by Commodities and Countries	8
	Class
Agricultural and vegetable products (except chemicals, fibres and wood):	
A — Mainly food	1 to 390
B — Other than food	1500 to 1846
Animals and animal products (except chemicals and fibres)	2001 to 2347
Fibres, textiles and textile products	3001 to 3999
Wood, wood products and paper	4002 to 4311
Iron and its products	5001 to 5894
Non-ferrous metals and their products	6001 to 6599
Non-metallic minerals and their products (except chemicals)	7001 to 7315
Chemicals and allied products	8001 to 8989
Miscellaneous commodities	9000 to 9275
Special transactions — Non-trade	9905 to 9992

VALUE, PRICE AND VOLUME INDEXES at end of report.

EXPLANATORY NOTES

1. **Source of Data.** Statistics of imports are based upon the declarations of importers (import entries) as subsequently checked by customs officials.
2. **Valuation.** The value of goods imported is usually the value as determined for customs duty purposes. In most cases this corresponds to the value shown on the invoice accompanying the goods, converted to Canadian dollars at authorized exchange rates (usually the commercial rate prevailing at the date on which the goods were actually dispatched to Canada), and excluding such charges as freight, insurance, handling and taxes. In effect, therefore, import values are taken f.o.b. point of shipment in the country of export.

Effective with statistics for January, 1959, the statistical value of imports on which dumping duty has been collected is considered to be the value of the goods as declared by the importer (i.e. the value for duty less the amount of dumping duty). This change in procedure is to conform with the principle that trade statistics should show, whenever possible, the actual amount paid for imports. Previously the statistical value of such imports was considered to be the value for duty.

3. **Units of Quantity.** Weight, where shown, is the net weight of the goods, excluding the weight of such packing as is required for shipment, except in certain special cases otherwise defined in the Customs Tariff. The expression "ton" means 2,000 pounds, and "cwt." 100 pounds, avoirdupois. Where other units of quantity are used, Imperial standards apply.

In this report are statistical classes such as "lawn mowers, power, and parts" which show a quantity in "number" and a value. In these classes the "number" refers only to the number of substantially complete units imported, while the value includes also the value of any parts of the commodity imported. For such classes the average value per unit cannot be ascertained.

4. **Coverage.** Statistics of imports include substantially all goods which enter Canada and are cleared by customs officials for domestic sale or use. The series therefore includes goods which are cleared by customs immediately on entry into the country, and goods cleared out of customs warehouses; but excludes goods placed in customs warehouses on entering the country. The technical phrase "Imports entered for consumption" which is sometimes used to describe Canadian import statistics does not imply that all imports will actually be consumed in Canada, but only that they are free to be so consumed without further customs formalities.
5. **Exclusions.** Import statistics exclude gold, but include gold products where the value of the gold content is less than 80% of the value of the commodity. A small amount of gold scrap in the form of jewellers' sweepings is also included. Other important exclusions are goods for the use of United States forces stationed at treaty bases in Canada, ships of British construction and registry imported for use in Canada, ships purchased for use in foreign trade, bunker supplies and ships' stores purchased by Canadian vessels abroad, temporary imports for exhibition or competition, Canadian-owned military equipment returned to Canada, and, from January 1, 1960, goods imported for foreign armed forces or diplomats stationed in Canada, settlers' effects, private donations and gifts, and tourist purchases exempt from duty (see blue pages of the January, 1960, issue of this report).
6. **Countries Credited.** Imports are usually credited to the country from which the goods were consigned to Canada. The country of consignment is the country from which goods have come to Canada without interruption of transit except in the course of transfer from one means of conveyance to another.

An exception to this rule is made in the case of imports of goods originating in Central or South America (including the Antilles and Bermuda) which are consigned to Canada from the United States. These imports are credited to the country in which the goods originated.

7. **Time Periods.** Import statistics for any month include all goods declared on import entries received at the Bureau of Statistics during the calendar month in question.
8. **Abbreviations.** Many descriptions of countries and commodities used in this report are abbreviated or incomplete because of mechanical limitations. A key to abbreviations of countries appears in this report, and full descriptions of all commodities appear in Volume III of the annual report "Trade of Canada". The letters "N.O.P." mean "not otherwise provided for", "N.E.S.", "not elsewhere specified".
9. **Revisions.** All statistics in this report are subject to revision. Revisions to previous reports are published on the coloured pages at the beginning of each monthly report.

KEY TO ABBREVIATIONS OF COUNTRIES

Note: The classification of Countries with a statement of the territorial limits used for statistical purposes will be found in the blue pages of the January, 1960 report. There are additional amendments of coverage in the January, 1961 and the January, 1962 reports.

Value, Price and Volume Indexes of Imports

The following table gives index numbers of the declared (statistical) value of imports by months, and of the unit value (price) and volume of these imports. The value index expresses the value of imports in a given month as a percentage of the monthly average in the base year. The price index is of the fixed-weight aggregative (Laspeyres) type, and combines unit values calculated from the monthly import statistics with specified wholesale or other price quotations. These latter quotations are used where inadequate quantity reporting or insufficiently homogeneous items in the trade statistics prevent the obtaining of sufficiently representative unit value series. The volume index is derived by dividing the value index by the corresponding price index, and is, therefore, of the currently-weighted (Paasche) type.

In computing the price index certain adjustments were made to the regular grouping of commodities used in the trade statistics, and all three indexes are presented on the basis of these adjusted groups. The chief adjustments are as follows: the two groups "agricultural and vegetable products" and "animals and animal products" have been combined into one group now titled "agricultural and animal products"; the sub-group "rubber and its products" (1678-1732) and the item "advertising matter" (4291) have been transferred to the "miscellaneous products" group; three "ships" items (9155-57) have been transferred to the "iron and steel and their products" group; and a few other adjustments designed to improve group classification by component material have been made. Beginning with statistics for January 1960, the trade totals used for the purpose of all three indexes are also adjusted for "Special Transactions - Non-Trade" as described in the blue pages of the January 1960 issue of this report. It should be noted that the item "arms, etc., British or N.A.T.O. countries" (9196) was already being deducted for index purposes from the "miscellaneous products" group and from the grand total prior to January 1960.

These indexes are currently computed from the original data for months, quarters and calendar years. Approximate indexes for other periods may be obtained by averaging the monthly values. Although such indexes will be less accurate than would result from a separate computation based on the original data, the margin of error is insufficient to necessitate a lengthy separate computation.

A complete record of these series by months for the post-war period is published in issues of Volume I of the annual report "Trade of Canada". Some additional commodity information appears in issues of the "Review of Foreign Trade". Details of the computation of the price indexes are given in DBS Reference Paper, No. 8, 1950, titled "Export and Import Price Indexes by Months, July 1945 - June 1950 (1948 = 100)".
